ABSTRACT OF THE DISCLOSURE

The present invention relates to laundry detergent compositions which provide enhance hydrophilic soil cleaning benefits, said compositions comprising:

a) from about 0.01% by weight of a zwitterionic polyamine;

b) from about 0.01% by weight, of a surfactant system comprising:

i) from 0% to 80% by weight, of a mid-chain branched alkyl sulfate surfactant;

ii) from 0% to 80% by weight, of a mid-chain branched aryl sulfonate surfactant;

iii) optionally from 0.01% by weight, of a surfactant selected from the group consisting of anionic, nonionic, cationic, zwitterionic, ampholytic surfactants, and mixtures thereof;

c) the balance carriers and other adjunct ingredients.
